We recently published the description of a new agelenid spider *Tegenaria amirani* (Seropian, Bulbulashvili et Makharadze 2025). However, no holotype depository was indicated in the paper. This is mandatory after 1999 according to the current International Code of Zoological Nomenclature, and the new species name would be a *nomen nudum* and unavailable (ICZN 1999: Art. 16.4.2). In this corrigendum, we indicate the holotype depository, which we did not include in the original paper. We thank Theo Blick (Hummeltal, Germany) for kindly pointing out this error. To rectify this oversight, we provide the missing depository information: the holotype with the sample code CaBOL-ID 1009928 and paratypes with the sample codes CaBOL-ID 1009929 and CaBOL-ID 1020867, are all deposited in the scientific collections of Ilia State University, Tbilisi, Georgia.
